Authorisation flow: select a credential from a list in the wallet, go through the issuer's authorisation process and be issued a credential into the wallet

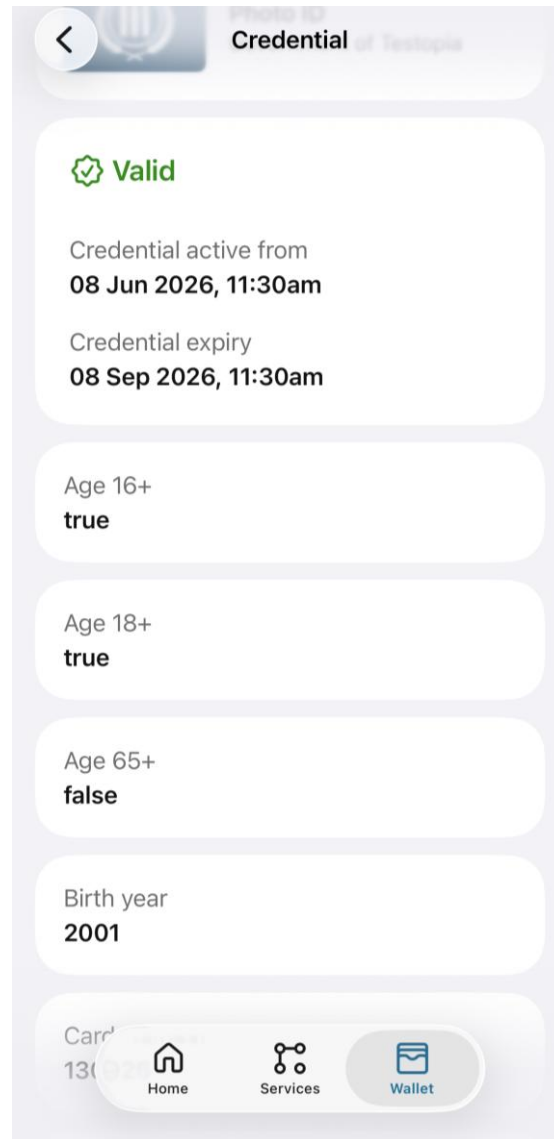

Pre-auth flow: scan a QR code that has been generated through a separate authorisation process. Enter a 2FA code and use biometric scan to confirm the credential can be added.

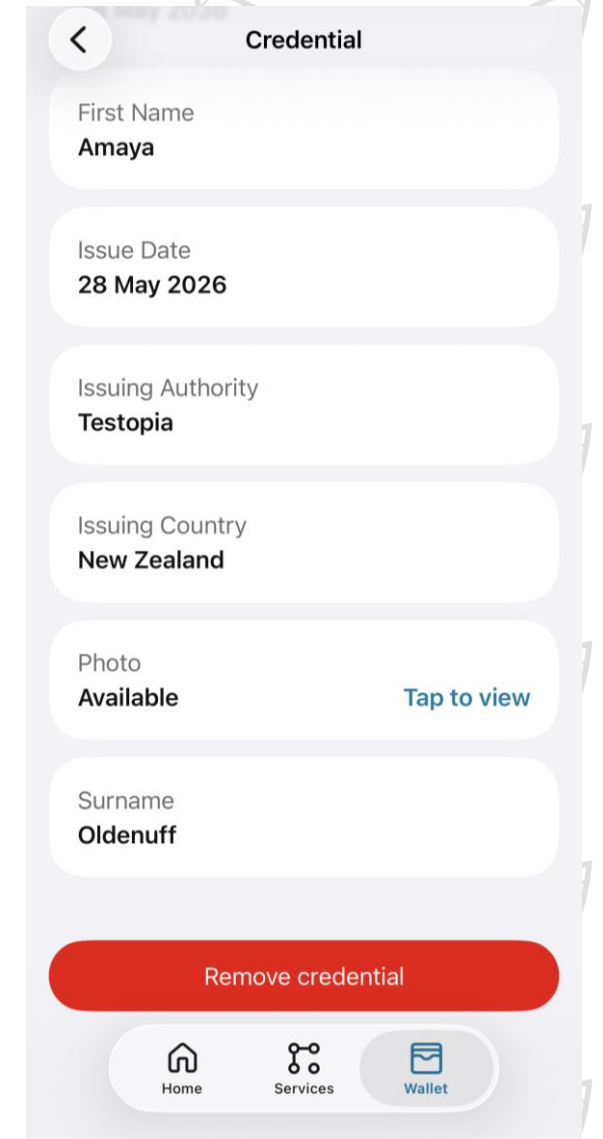

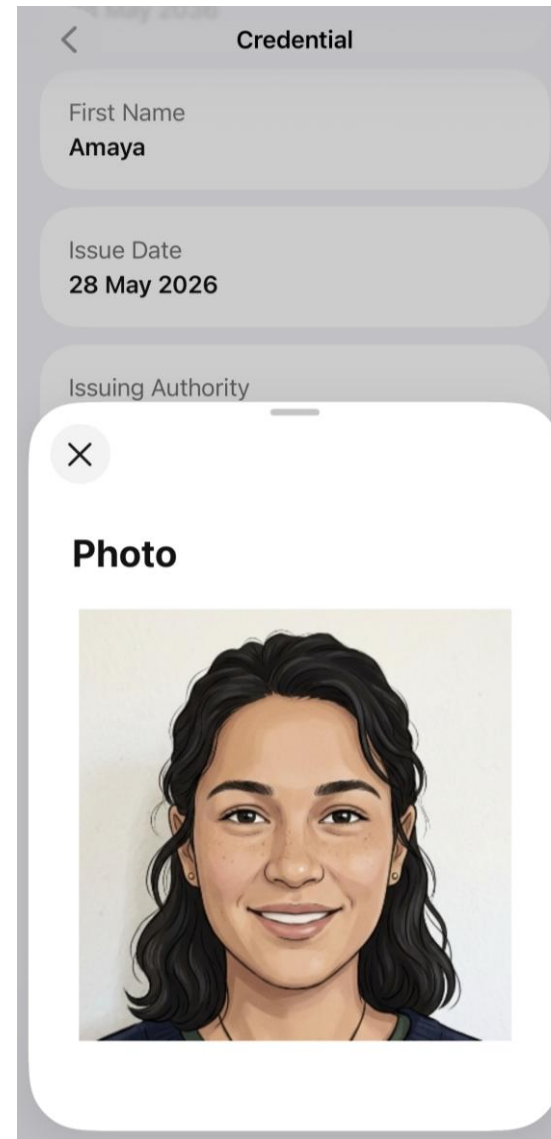

Credentials in the wallet

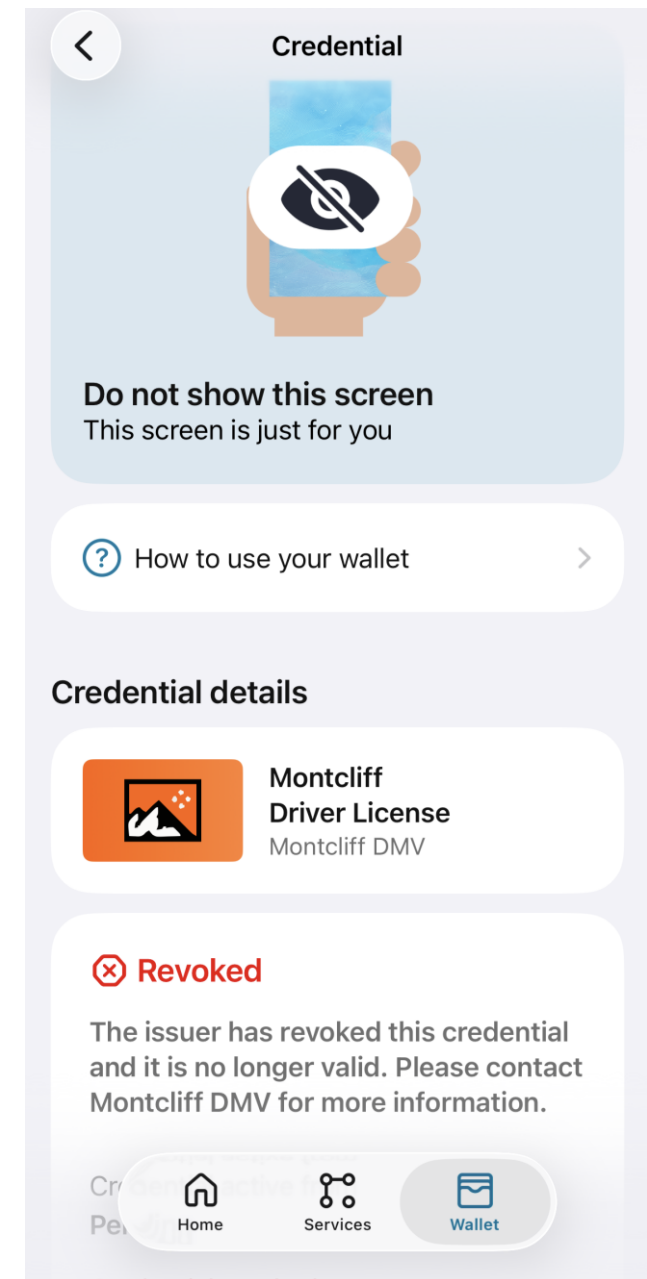

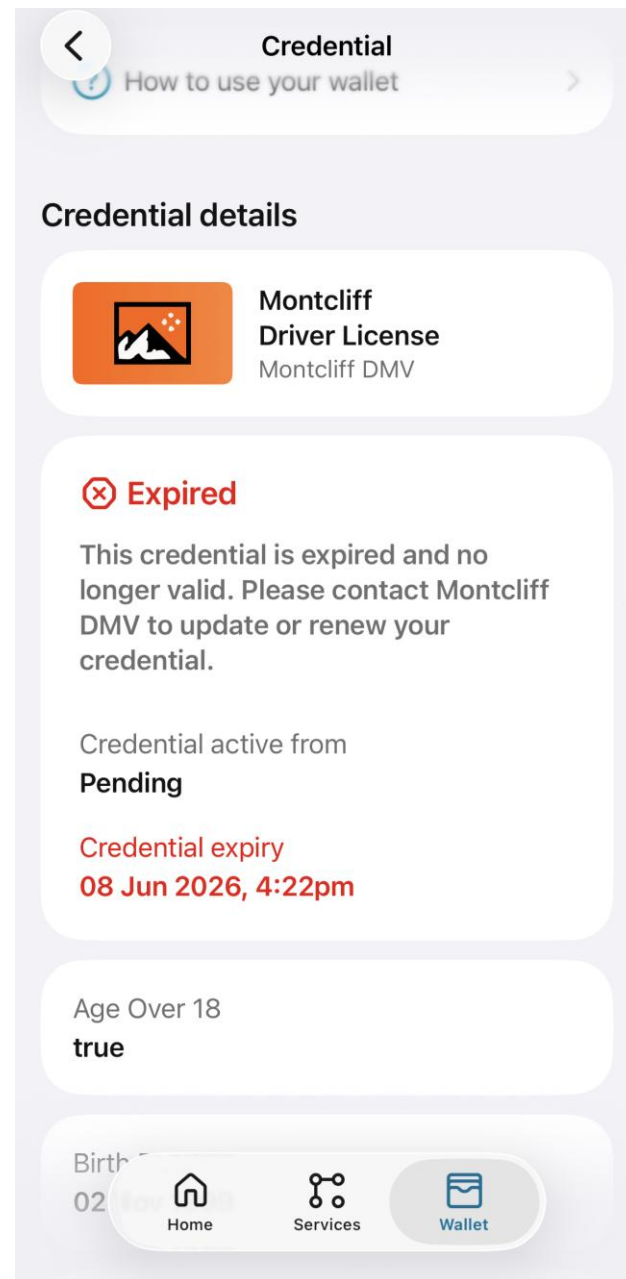

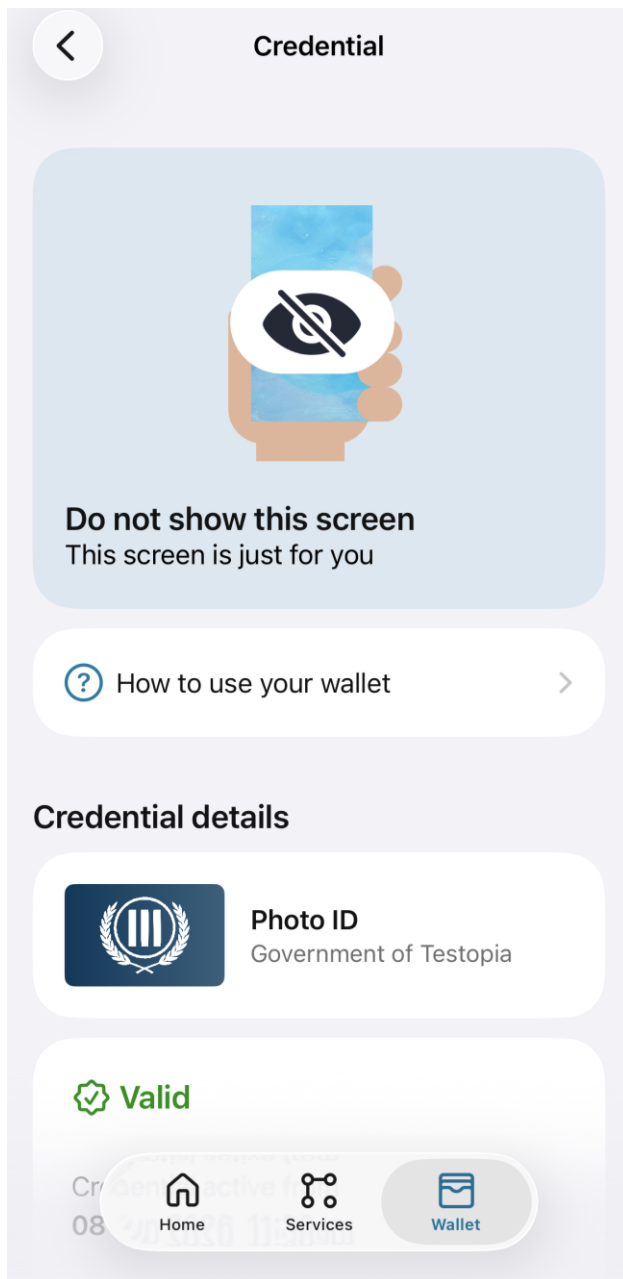

View all credentials in the wallet, includes status of inactive items

View details of a selected credential, after authenticating using device biometric scan. Option to remove credential.

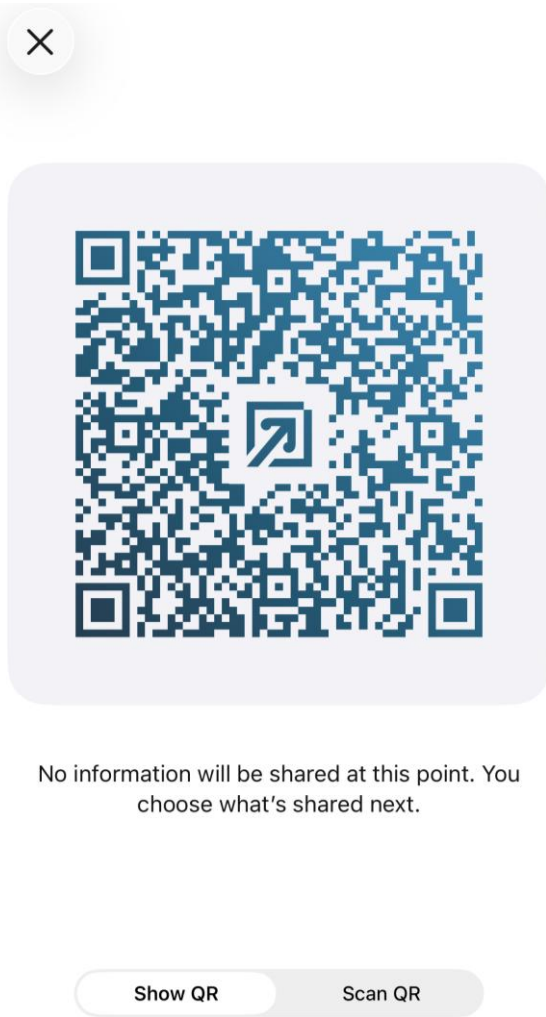

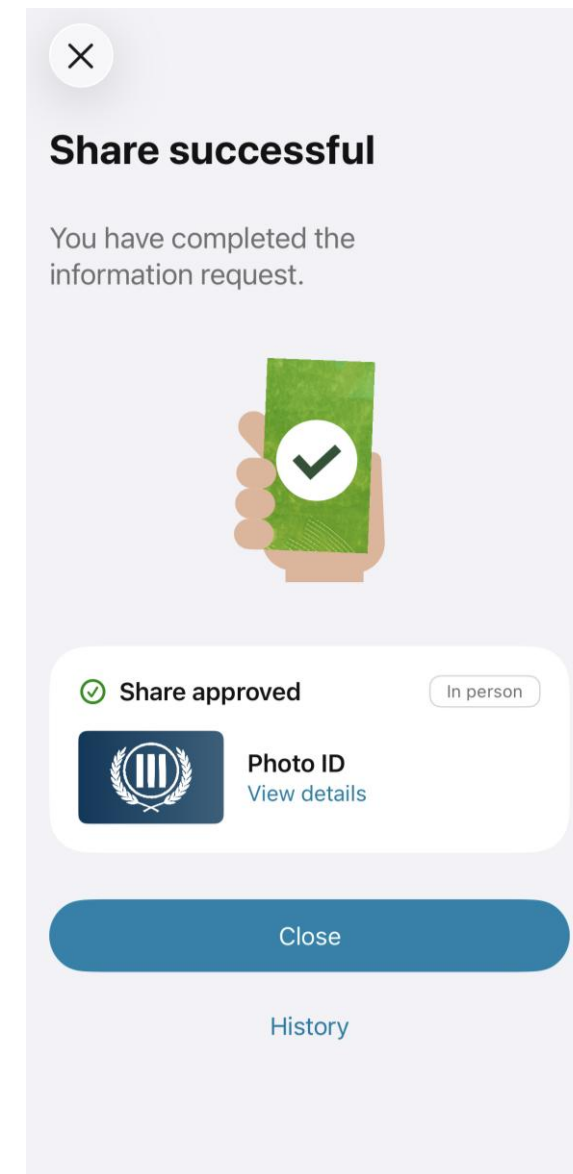

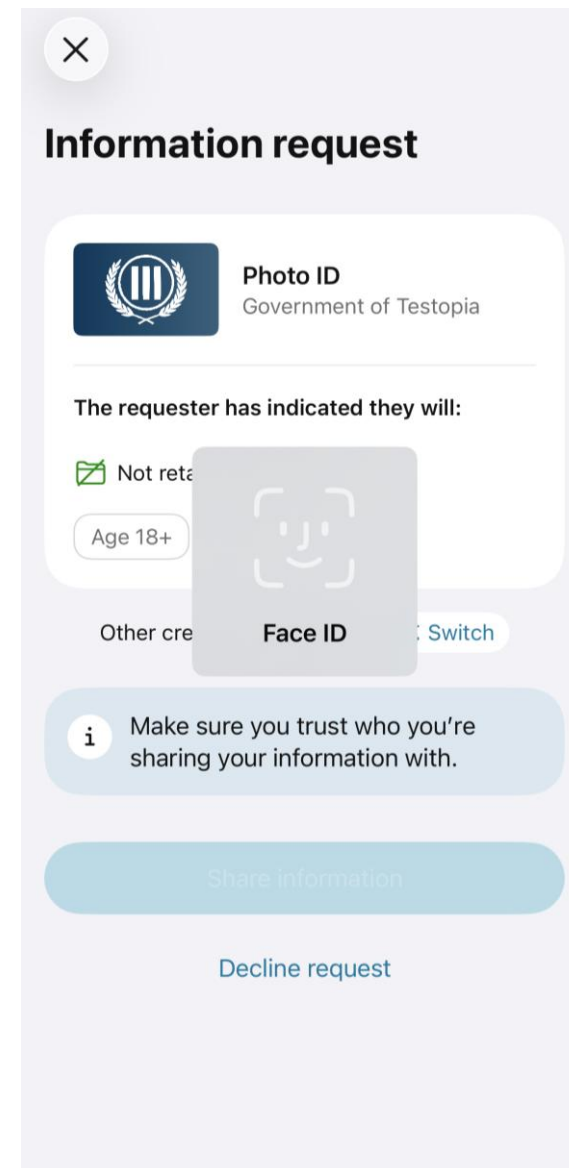

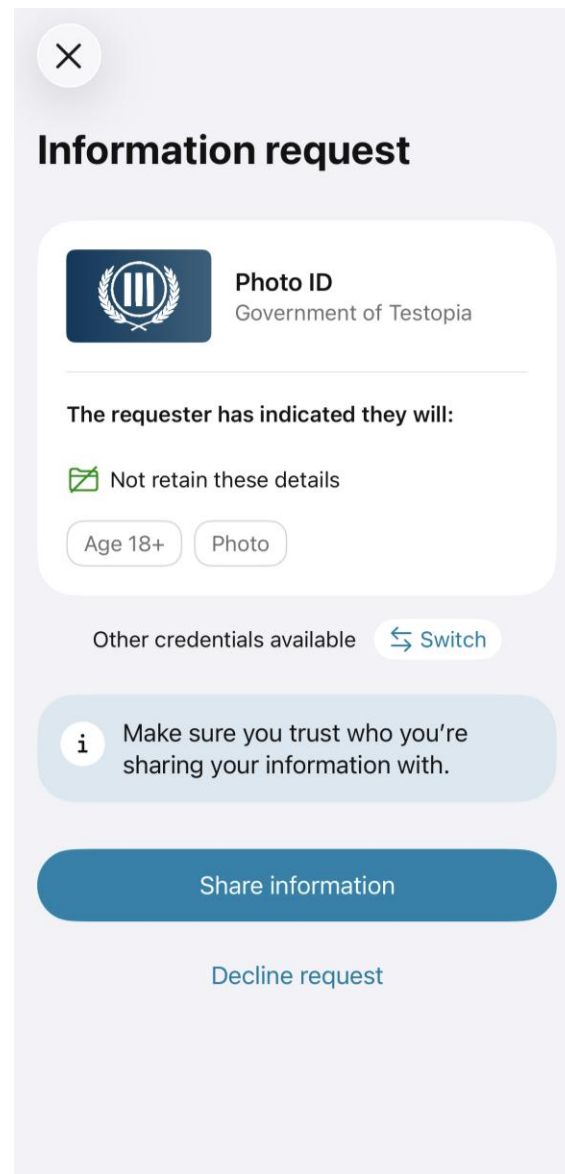

Detail screen provides reminder not to show credential to anyone. Also displays details of inactive credentials.

In-person credential presentation

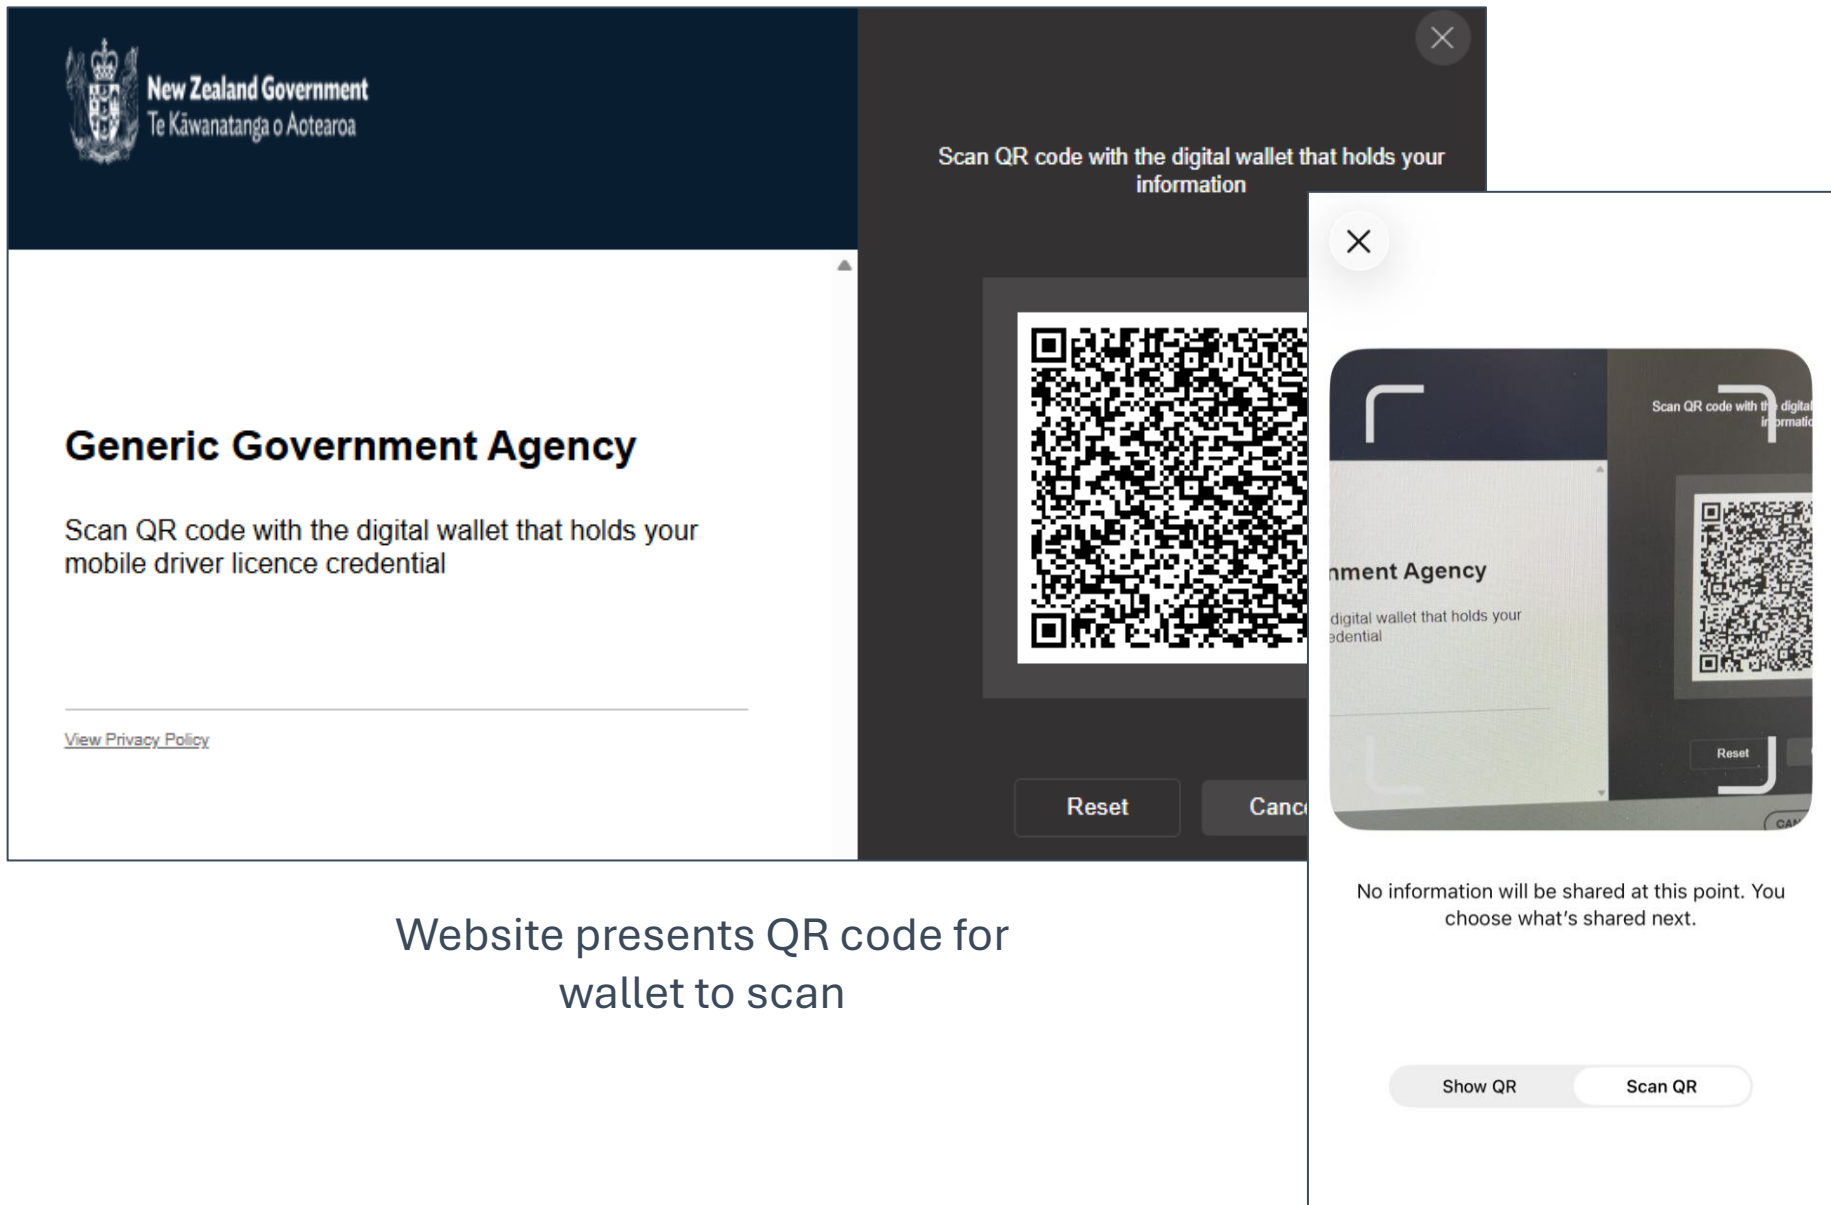

User presents a QR code to in-person verifier device or uses NFC (Android)

Wallet automatically selects a credential that matches the presentation request. User may switch to another credential, then share or decline the request.

Online credential presentation Cross-device flow

Website presents QR code for
wallet to scan

Wallet uses *Scan QR* mode
